Course Description:

This course offers an overview of selected important topics in urban economics. Urban economics, as a discipline, lies at the intersection of geography and economics. At a general level, urban economics brings space into economic consideration. Primarily, this course will address the following questions. Why do cities exist? Why do cities differ in size, structure, and other characteristics? What makes some of the cities grow exponentially? How do firms and individuals decide where to locate? Why do firms cluster in urban locations? How price of land is determined, and how it varies across space? What causes urban problems such as poverty, crime, housing, transportation, and pollution? How urban government addresses the above-mentioned issues? This course will be applied in nature and will take an interdisciplinary approach.

Textbook:

O'Sullivan Arthur, Urban Economics (8th Edition), McGraw Hill/Irwin.

Course expectations:

I don't assume prior knowledge of microeconomics and calculus. Some class time will be used to cover the basics of economics and econometrics.

Course Objectives:

Students completing this course should be able to:

- a) Identify the factors driving the growth and fall of cities – historically and in the present.
- b) Understand the concept of agglomeration economies.
- c) Understand the impact of policies to encourage local economic growth.
- d) Explain the evolution of urban land use patterns and density.
- e) Understand the role of government in growth of cities.
- f) Analyze the impact of different housing policies on cities growth.
- g) Understand the causes and consequences of racial and economic segregation and learn about the effectiveness of intervention.

Instructional Methods:

Classes will be conducted using lectures, discussions, and audio-visual presentations.

Course Requirements:

Weekly reading- you are expected to read and intellectually comprehend assigned readings for class discussion and written submission.

Assignment- you are required to do 5 assignments. The assignments are an important component of the course and each will count toward your final grade. You will be given at least 7 days (announced in the class) to complete your assignments.

Project- during the semester, students are expected to identify a research topic of their interest. Final project for the course includes, a comprehensive research proposal/paper, and a presentation.

Grading:

Assignments:	50% of the final grades
Article Summary:	5% of the final grades (4X1.25%)
Class Participation:	10% of the final grades
